

# Installation

Installing any of our soundsets for Zebra2 is straightforward. After unpacking the archive, you'll first have to locate the preset folder of your Zebra2 installation. The exact location of this folder on your hard drive depends on which operating system and plug-in format you're using; the easy way to locate it is to start a Zebra2 instance, switch to its **Presets** browser, right-click on the **Local** entry in the rightmost pane and select **Open in Explorer** (or **Reveal in Finder**) from the context menu.

Once you've found and opened your presets folder, just copy (or move) the subfolder named like the soundset (e.g. “**Zebra Chicklets**”) from your installation archive there. Zebra2 will pick up your new presets upon its next launch; you can also choose **Refresh** from the preset browser's context menu mentioned above to pick them up right away.
